

10 YEAR OLD BOY LOSES HIS EYE SITE PERMANENTLY AFTER AIRBAG EXPLODES IN HIS FACE.

Be warned: The air bag on the front passenger side of your vehicle can gruesomely injure or kill your child.

The airbag built into your dashboard on the passenger side is designed to deploy at the chest height of an average adult. That is why the safest place for small children is actually in the back seat.

This ten year old boy from Namibia has been blinded permanently by an airbag that exploded in front of him whilst he was seated in the front passenger seat of a BMW.

Doctors say that the 10 year old boy's eyes literally ruptured on impact. Dr Jonathan Joffe who is treating the child says that this is the worst case that he has seen thus far in his career and that Emmanuel will not regain his site with the current technology that exists.
